Ref: NHCE/CV/2019-20/Seminar/Rep/

Date: 27/07/2021

REPORT

The webinar was held on 24th July 2021 for 4th Semester Civil Engineering students and other members. The Program began with an invocation song by group of students. The welcome address was given by **Dr. Natchimuthu Subramani**, Associate Professor, and Department of Civil Engineering.

Dr.P S Niranjan, Professor, and Head spoke about the importance of the skillset requirements among civil engineers.

The Resource person of the webinar was introduced to the participants by **Dr. Natchimuthu Subramani**, Associate Professor of Civil Engineering Department.

Dr. N.S KUMAR., the Resource person, deliberated the whole session with case studies and brain storming sessions involving active participation in many related hands on activities.

The Vote of thanks was delivered by **Mr. Rahul NK** , Assistant Professor, Department of Civil Engineering.

The excerpt of his seminar is as follows:

Civil engineers design and supervise large-scale public work construction projects, such as roads, buildings, tunnels, dams, and bridges. They are responsible for gathering project requirements, testing and evaluating building sites and materials, and managing the overall building process from start to finish. That means that civil engineers need to see and understand the big picture, and also be able to execute the tiniest of details.

The increasing pace of change in the industry requires the Institution to improve its systems and procedures for continuously reviewing and updating the skills requirements of civil engineers.

‘Soft skills’ are becoming increasingly important, particularly with the increase in multi-disciplinary working in construction, the increasing importance of stakeholder engagement and the impact of digital technology. These skills are seen to be lacking among civil engineers in the workplace. The importance of soft skills should be promoted at every level, and appropriate training or up skilling provided.

Team working is becoming increasingly important, particularly with multi-disciplinary working crossing the boundaries between disciplines and companies. This reinforces the need for a greater breadth of skills, including understanding of other disciplines and soft skills such as communication.

The profession must embrace digital technology, and civil engineers should develop the rapidly-evolving skills needed to exploit its benefits.
